

The NEXT STEP[®] in Dispersion Analysis

Multi-Wavelength Separation Analyser

LUMiReader[®] PSA

Real-Time Dispersion Stability & Particle Size Distribution

Particle sizing according to ISO 13317

Benefits

- ▶ High-end analyser for quality control, process monitoring and R & D
- ▶ Direct, fast and objective characterization of any separation phenomena
- ▶ Analysis under original conditions
- ▶ Accelerated phase separation by patented inclination mode at gravity
- ▶ No moving parts
- ▶ Endless monitoring of sample behaviour for long-time storage information
- ▶ For concentrated and diluted suspensions and emulsions
- ▶ different cell types and customizing options to fit your application
- ▶ Easy operation, comprehensive information

Specifications

- Multiple light sources with different wavelengths
- Advanced optics, variable light intensity
- Temperature control from room temperature + 4K to 60° C, ±1 K
- Measuring time 1 sec - months
- Append measurement option for long-time monitoring
- Sample volume 0.5 ml - 4 ml (depending on cell type)
- Sample concentration 0.00015 Vol% - 75 Vol%
- Particle size: 500 nm - hundreds of µm
- PC controlled operation, USB interface
- Conformity: ISO/TR 13097; ISO 13317; CFR 21 Part 11

 The NEXT STEP® in Dispersion Analysis

© 2013 LUM GmbH

Velocity Distribution $Q_v(v)$, $q_v(v)$

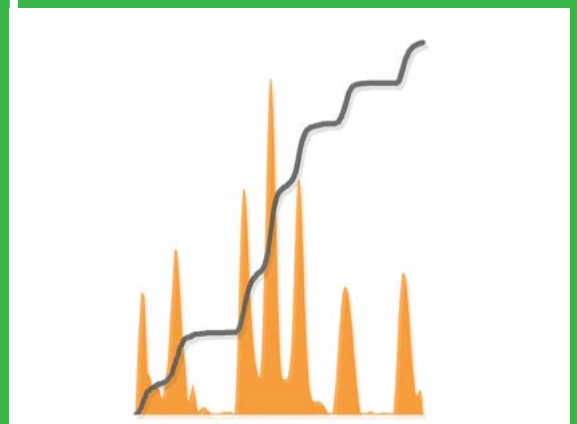

- Direct measurement - no calibration / no material properties
- Always available - fast information for quality control
- Qualitative information about particle size and polydispersity

Intensity Weighted Particle Size Distribution $Q_{Int}(x)$, $q_{Int}(x)$

- Quantitative information about particle size distribution

Volume Weighted Particle Size Distribution $Q_3(x)$, $q_3(x)$

- Quantitative information about particle size and volume fraction of each class
- Conversion into mass or number distribution
